

The main ingredient

As a serious craft brewer, you already know how important water is to the beer brewing process.

Try to imagine what it would be like to have higher level control of your biggest and most important ingredient – your water. You would have the ability to easily customize the “recipe” of the water you use for every beer you craft. You control the hardness and alkalinity, mineral content, by using Reverse Osmosis (R/O) to ensure the removal of unwanted tastes and chemicals that exist in your source water.

Of course, you would also be able to continuously monitor not only the quality of your water, but the consumption as well, all in real time. You would know how and where water is being used throughout your operation, how much is used to make your products, and how much is used for cleaning. In the event of a malfunction during the process, Intuitive Water Systems automatically notifies you, saving you valuable time, money and production loss.

While you’re dreaming big, you might as well think of everything. We can monitor your waste water output volumes to help you keep your ratio of production water to wastewater in check.

It’s no dream.

Welcome to Intuitive Water Systems.

Intuitive Water Systems lets brewers take control of their source water, whether it comes from a well, a spring, or municipal supply. Customizing your water supply is an important step to making better beers.

Water impacts beer in three ways:

- During the mashing process – water ions are critical as the character of the water determines the efficiency and flavour of the extracted wort.
- It affects the perceived bitterness and hop utilization of finished beer.
- It adds flavour directly to the beer itself.

Know your source, manage your consumption, monitor your business.

Talk to an Intuitive Water Systems specialist about your specific brewing needs. They can recommend the best way to start taking charge of your water, while meeting your budget requirements. It’s an investment in your brewery that produces tangible returns, including cost savings.

Making even better beer is the best return of all.
