

Intuitive Water Systems: Ensuring Healthier Water for Healthier Birds

Frustrated with plugged drinkers and unhealthy birds?

Problem solved - through Intuitive Water Systems® clean water solution. We start by treating your water with a simple to install/maintain backwashing filter unit designed to remove iron, sulphur and manganese from your flock's drinking water. We include our monitoring package as the "eyes and ears" to closely and continuously monitor the quality of your water – because things can change instantly – and this ensures you get notified within seconds if something isn't right. The IWS monitor can also track your water usage, pH, ORP and any other parameters that impact your bottom line. This ensures you are well on your way to keeping your water lines clean and your birds happy, which makes for a more efficient and profitable operation.

Tight budget? No problem! If you are in start-up or growth mode Intuitive Water Systems® can provide a more minimal approach to making your water clean and safe that meets bio-security guidelines, while monitoring for volumes and pressures. Our systems are designed to help you grow your business and can very simply be upgraded with minimal or no disruption to your operations.

Poultry farmers already benefiting from our treatment and monitoring solutions have not only shared with us statistics on quicker growth and lower mortality, but also report their birds are significantly calmer. With Intuitive Water Systems®, you get safe, clean water for your birds, protection from water-based Bio-Security risks, and peace of mind for yourself!

Your birds are made up of about 70% water. It just makes sense to provide them with safe, clean water for optimum health, growth and disease resistance in your facility. Intuitive Water Systems®– the proven way to protect your investment!
