

# A Recipe for Water

## **Water is the driving force of all nature.** ~Leonardo de Vinci

The best dishes begin with a great recipe. Whether you are operating an independent restaurant or an international franchise, your recipes are a key component of your formula for success. At Intuitive Water Systems Inc., we develop water recipes.

Our mission is to create sustainable water systems for businesses to meet your ideal product requirements. Intuitive ensures that your production water is of the highest quality. In addition, we provide protection for your business and your customers by providing consistently safe water. We also help you comply with municipal and government regulations and help the environment by eliminating any harmful discharge and reducing wastewater. Intuitive designs, installs and manages water and wastewater applications for restaurants, bars, bistros, golf & country clubs, brewers, coffee shops, and wineries.

## **All water is not created equal.**

The taste of your beverage will change depending on the composition and treatment of the water being used. Changing the recipe of your water is a

fundamental way to differentiate your product from your competitors. What are the levels of sodium, calcium and magnesium in your water supply? Are you adequately filtering your water to optimize taste? Is your water source pure? There is a science behind your water and Intuitive Water Systems are experts in that science.

## **What's in your water?**

First, Intuitive Water Systems will test your water composition for numerous chemicals and substances. Next, we craft a water recipe to meet your requirements to ensure your product is of highest quality and taste. We then custom design and build a water treatment/filtration system which typically includes ultra-violet purification or reverse osmosis. Once installed, we remotely monitor the system with our proprietary software system, Mandala™, that measures your water consumption, pressures in and out, temperature and relative wastage. You have access to your data from your personal laptop or cell phone in real time, providing you with peace of mind in knowing that your operation is running efficiently.

## **Already have your own system?**

We can enhance what you already have in place, or simply add our sensors and link to Mandala™ to ensure your system is operating as efficiently as possible.

## **A perfect solution.**

We are experienced in addressing food & beverage water quality issues for virtually all forms of source water, including municipal/city water supply and rural and remote locations. We offer solutions for both water quality management and wastewater treatment.

Get in touch with an Intuitive representative today to learn how taking control of every aspect of your water will positively impact your business.
